

AI that works while you sleep.

We help South African businesses stop experimenting with AI and start getting results from it. Safely, practically, and without the guesswork.

The AI race is no longer about tools.

It is about **who gets the work done.**

Almost every business has tried ChatGPT by now. The ones pulling ahead have moved on to something different: AI that takes work off people's plates, every day, without being asked.

AI TOOLS

Wait for someone to type a prompt

Forget everything between chats

Help one person at a time

Add one more thing to learn

AI AGENTS

Take initiative on routine work

Learn how your business runs

Support whole teams and workflows

Get better every week they run

Guesswork is expensive

Without a plan, businesses pay to roll out tools that do not fit the work.

Staff need a new skill

Not just prompting, but briefing, supervising and checking an AI colleague.

Threats are AI-powered

Attackers already use AI. Defence has to keep pace.

QuantumBerry AI exists to close that gap: a clear plan first, then systems that deliver real, measurable impact.

OUR APPROACH

Plan it. Build it. **Let it run.**

Three steps, in the right order. Nothing gets built until we know it is worth building.

1

Audit

We map your departments, workflows and the systems you already use. We show you where AI will move the needle, and where it would be overkill.

2

Build

We deliver the roadmap in focused phases: agents, automations, web platforms and secure integrations. Small wins first, then scale.

3

Run

Your agents keep learning and improving. We stay close: training your people, keeping systems secure and extending what works.

The audit protects your budget. Rolling out AI without one is guesswork. With one, you know exactly what you are buying and why.

Four ways we put AI to work for you

Use one, or combine them. Everything is modular and built around what your business actually needs.

START HERE

AI Audit and Roadmap

A clear, costed plan showing where AI will save time, cut cost or win revenue, from a 12-month plan to a 3 to 5 year view.

YOUR AI COLLEAGUE

Hermes AI Agents

Agents that learn your business and take on real work: inboxes, reporting, research, scheduling, content and more.

STAY PROTECTED

AI Security

AI-driven security testing to find weak points before attackers do, with a recognised security standard to show for it.

MOVE FAST

AI Websites and Apps

Websites, portals, booking and database apps, built in weeks rather than months, at a fraction of traditional agency effort.

Plus hands-on, department-specific AI training, so your people know when to use AI, which tool to pick, and how to check the result.

Know exactly where AI will pay off, before you spend a rand

The audit is the smartest first move any business can make. It replaces assumptions with a plan you can take to your board.

What you get

- ✓ **A map of your business**
Departments, workflows and the systems already in place.
- ✓ **A clear line**
Where AI will materially help, and where it would be overkill.
- ✓ **A costed roadmap**
What to do now, what to do next, and what to leave alone.
- ✓ **A security and data check**
Governance, privacy and POPIA built in from day one.

Why leaders choose it

“Training or tools scoped without an audit is guesswork. You end up paying to roll out things that do not suit the work.”

The result is a roadmap you can act on: an immediate 12-month plan, or a 3 to 5 year view of how AI and agents should grow across the business.

Time saved

Costs reduced

Risk managed

Budget protected

An agent is **grown**, not installed.

Hermes is our agent platform. It learns your products, your people and your way of working, and builds a memory of your business that compounds with use. It does not start cold every morning.

What it can take on

- ✓ **Inbox and admin**
Watches mail, drafts replies, books and organises.
- ✓ **Reporting**
Weekly summaries and performance reports, written for you.
- ✓ **Research and leads**
Finds prospects, researches them, prepares outreach.
- ✓ **Content and follow-ups**
Drafts posts, newsletters and routine communication.

Why it is different

- ✓ **Private by design**
Your data and your rules, with clear approval steps.
- ✓ **Built to move quickly**
Live in weeks, then cheap and easy to extend.
- ✓ **Always on**
Works in the background, 24 hours a day.
- ✓ **Humans stay in charge**
Your team reviews and approves what matters.

WEEK 1

Learns your tools and tasks

MONTH 1

Handles routine work

MONTH 6

Knows your business like a colleague

Stay protected. Move fast.

AI Security

Attacks are now powered by AI. Defence has to be too.

AI-driven testing

Scans your domains and platforms for weak points.

Prevent disruption

Helps stop defacement, downtime and data loss.

A certified standard

Security assurance built on leading AI security tooling.

AI Websites and Apps

From idea to working platform in weeks, not months.

Websites and portals

Fast, modern, secure, and easy to update.

Custom business apps

Booking, stock, customer databases, dashboards.

Phased and affordable

Approve and pay one phase at a time.

Every build comes with AI baked in, security from the start, and a roadmap for what to add next.

LET'S TALK

Ready to see what AI can do for you?

A short conversation is all it takes to find out where your business stands and where the first quick wins are.

STEP 1

Short intro call

STEP 2

AI audit and
roadmap

STEP 3

Pilot build

STEP 4

Scale and
support
